ABSTRACT ALGEBRA: AN INTRODUCTION is intended for a first undergraduate course in modern abstract algebra. Its flexible design makes it suitable for courses of various lengths and different levels of mathematical sophistication, ranging from a traditional abstract algebra course to one with a more applied flavor.

In mathematics, de Moivre's formula (also known as de Moivre's theorem and de Moivre's identity), named after Abraham de Moivre, states that for any real number x and integer n it holds that  $(\hat{a}^i + \hat{a}^j ()) = \hat{a}^i + \hat{a}^j ()$ , where i is the imaginary unit ( $i^2 = -1$ ). While the formula was named after de Moivre, he never stated it in his works. The expression  $\cos(x) + i \sin(x)$  is sometimes ...

**De Moivre's formula - Wikipedia**

De Moivre's formula is a mathematical identity that states that for any real number x and any integer n,  $(\cos x + i \sin x)^n = \cos nx + i \sin nx$ . It is named after Abraham de Moivre, a French mathematician. The formula is a special case of Euler's formula, which states that  $e^{ix} = \cos x + i \sin x$ . De Moivre's formula can be used to find the powers of complex numbers in polar form. It is also used in the derivation of the binomial theorem for complex numbers.
