

biodiversity of the western pdf

Biodiversity is not evenly distributed, rather it varies greatly across the globe as well as within regions. Among other factors, the diversity of all living things depends on temperature, precipitation, altitude, soils, geography and the presence of other species. The study of the spatial distribution of organisms, species and ecosystems, is the science of biogeography.

Biodiversity is important, more than just the 'I want my children to enjoy it' reason. For example, the richness of diversity allows medicines and foods to be naturally available. The natural disaster prevention mechanisms in most ecosystems and other free services we all get from the surrounding environment are not easily replaceable or replicable, so maintaining biodiversity is important.

Bridgewater, located south-west Victoria, is a thin coastal plain of Tertiary and Quaternary deposits forming a barrier complex. A dune capped sand ridge stretches along the coastline with gently sloping sandy terrain and lagoonal systems behind. The lagoonal system supports a network of deep water pools, collapsed caverns or sink holes.
