Neuroscience (or neurobiology) is the scientific study of the nervous system. It is a multidisciplinary branch of biology that combines physiology, anatomy, molecular biology, developmental biology, cytology, mathematical modeling and psychology to understand the fundamental and emergent properties of neurons and neural circuits. The understanding of the biological basis of learning, memory ...

Oxidative Medicine and Cellular Longevity - Hindawi

Editor's note: In a complementary article, Dr. Mark J. Ashley discusses frontline rehabilitation methods that can improve brain injury recovery outcomes. Here, Marcela Pekna and Milos Pekny explain what happens within the brain after injury and how scientists' growing awareness of the brain's capacity for repair could lead to better treatment options.

Bioenergetics is a field in biochemistry and cell biology that concerns energy flow through living systems. This is an active area of biological research that includes the study of the transformation of energy in living organisms and the study of thousands of different cellular processes such as cellular respiration and the many other metabolic and enzymatic processes that lead to production ...

Brain Research publishes papers reporting interdisciplinary investigations of nervous system structure and function that are of general interest to the international community of neuroscientists. As is evident from the journals name, its scope is broad, ranging from cellular and molecular studies through systems neuroscience, cognition and disease.
