The Monty Hall problem is a brain teaser, in the form of a probability puzzle, loosely based on the American television game show Let's Make a Deal and named after its original host, Monty Hall. The problem was originally posed (and solved) in a letter by Steve Selvin to the American Statistician in 1975 (Selvin 1975a), (Selvin 1975b). It became famous as a question from a reader's letter quoted ...

In probability theory and statistics, the beta distribution is a family of continuous probability distributions defined on the interval  $[0, 1]$  parametrized by two positive shape parameters, denoted by  $\alpha$  and  $\beta$ , that appear as exponents of the random variable and control the shape of the distribution. It is a special case of the Dirichlet distribution. ...
